Caroline, 1) I don't know, and 2) sounds right to me. I will try to find out the answer to #1.--
Vicky

Vicky - Was the author at EPA when the paper was written? If not, the reporter should get the reports herself.

At least one of the authors is currently an EPA employee (I recognize the name), but I don't know about the others. I will see if we can get the papers through our EPA Library resources. But I would think the WSJ would be able to do that, too.

I'll follow up with Water Security Division to see if there is information that we can offer on the chemical behavior in pipes, beyond referencing the reporter to the websites we provided to Ken Ward.

Terri, do you have sufficient information to answer the first group of questions? I'm copying Fran, to give him a heads up, in case you want more on site status.--Vicky

+OW for the questions we don't have answers to.

Can we confirm that these are EPA studies that she links to?

Subject: FW: question from the Wall Street Journal - urgent

Importance: High

All,

WSJ reporter called me, and I asked that she put her questions in an email. I've segmented her questions based on what we know and have already answered, and what we may need to confer with others on. I have a 2:30 meeting with my RA on another matter, but wanted to get this out to you so collectively, we can do our best to respond by COB today. Reporter told me she's writing for tomorrow afternoon posting.

What we know/have already said

In WV we would like to know what is the EPA's involvement in terms of understanding why there still appears to be an odor from MCHM in some places in Charleston and some lingering health effects being reported.

What work is the EPA still doing in West Virginia and what do they understand at this point about the situation?

Do you know who came up with the flushing instructions to residents – was the EPA involved in that and what research was that based on?

What we may have to confer with others on

I also would like to know more broadly what do we know about what happens when a chemical gets into water pipes and what testing/work is being done on this or has been done? I believe this would be part of the EPA's water security work. (*Response to Ken Ward answers partially*)

I was also wondering if you or someone from the EPA might be able to send me these EPA

studies or others that are most relevant.

Subject: question from the Wall Street Journal - urgent

Hi Terri, Good to talk right now. As I explained, we are looking at what steps are being taken to understand the lingering chemical contamination in West Virginia. I would like to talk to the people who are most engaged in this issue of chemical contamination both in West Virginia and on a national level. In WV we would like to know what is the EPA's involvement in terms of understanding why there still appears to be an odor from MCHM in some places in Charleston and some lingering health effects being reported. What work is the EPA still doing in West Virginia and what do they understand at this point about the situation? Do you know who came up with the flushing instructions to residents – was the EPA involved in that and what research was that based on?

I also would like to know more broadly what do we know about what happens when a chemical gets into water pipes and what testing/work is being done on this or has been done? I believe this would be part of the EPA's water security work.

I was also wondering if you or someone from the EPA might be able to send me these EPA studies or others that are most relevant.

<http://ascelibrary.org/doi/abs/10.1061/9780784412312.308>

My deadline for this is later today.

Thanks very much.

Best,

Alexandra
